A2iA Releases A2iA TextReader™ V2.0 with Expanded Language Support

A2iA TextReader allows for full text transcription of machine printed and cursive handwritten documents without a dictionary for 6 languages: English, French, Arabic, Portuguese, German and Spanish

Paris, FR / New York, NY, April 11, 2016 – A2iA ([@A2iA](#), [@A2iAEurope](#)), a world leading developer of handwritten and machine printed text recognition, information extraction and intelligent document classification toolkits, announced the availability of [A2iA TextReader™ V2.0](#). Expanding its list of supported languages and character-types, this new release allows English, French, Arabic, Portuguese, German and Spanish documents to be automatically transcribed without a dictionary, regardless of whether written in machine print or cursive handwriting, and transformed into searchable and editable electronic data.

Able to recognize alpha and numeric data, *A2iA TextReader* is an SDK that does not require customization and can be applied to workflows with existing third-party classification and/or extraction engines for enhanced recognition and automation. Powered by a unique RNN-based technology developed by A2iA’s in-house R&D Team, users can process entire lines of writing without requiring a prior segmentation into characters or into words, allowing for increased read rates and reduced error rates.

“*A2iA TextReader* is a simple plug-and-play toolkit that increases an organization’s automation and access to critical revenue-driving data,” said Jean-Louis Fages, A2iA President and Chairman of the Board. “By delivering users complete processing control with no dictionary or customization required, the process is quick, simple and accurate.”

Applicable to multiple vertical markets and document types, [A2iA TextReader](#) can be integrated into global applications for use within the banking and fin-tech, BPO / service bureau, government, Insurance, healthcare, telecom and utilities markets.

About A2iA

[A2iA](#), Artificial Intelligence and Image Analysis (www.a2ia.com), is the worldwide leading developer of handwritten and machine printed text recognition, information extraction and intelligent document classification toolkits. By enhancing solutions from systems integrators and independent software vendors, A2iA allows complex and cursive data from all forms, documents and checks including unstructured handwritten letters, to become part of a structured database, making it searchable and reportable, with the same level of flexibility of printed or digital data. A2iA has been improving business process automation and delivering a visible ROI for over 20 years.
